

READINESS OF EUROPEAN SMEs FOR ADOPTION OF eINVOICING SERVICE

Objectives

Within the scope of my research I would like to focus on particular financial processes of SMEs' business transactions. My aim is to use results from previously done research and try to put them on a higher scale level, on the level of *“European SMEs' readiness” for adoption of eBusiness solutions, specifically on adoption of eInvoicing service* in other regions of Finland, Scandinavia (Sweden, Denmark) and the rest of the Europe (The Netherlands, Belgium, Slovakia, Slovenia, Czech Republic).

The purpose of this research is to concentrate on one very important topic for the SMEs, in increasing SME involvement into one of the most rapidly growing field of e-business: eInvoicing. The research addresses e-business policies that have been effectively implemented with concrete results, using B2B, B2G or C2G approaches.
